TIMING FAULTS ARE STORED - VEHICLE RUNNING POORLY - PLEASE ADVISE

Confirmed complaint. Scanned for stored faults, found multiple faults stored for timing, vanos and misfires. Noted loud noise from engine - measured engine oil level at 6.5L, capacity is 8.5L - topped up as needed, engine now running quieter but timing and faults are still present. Completed vanos test - failing test due to chain error. Completed timing chain test plan and determined bank 2 timing chain is out of range. Suspect timing chain has worn and stretched, repair is significant and would require removing engine and disassembling to access and replace chains and timing components.
